

JACK YONG TEOH

FULLSTACK SOFTWARE ENGINEER

• Kota Damansara, Petaling Jaya, Selangor • +6012-6647892 • yongjack010413@gmail.com

SUMMARY

Fullstack Software Engineer with 3 years of hands-on experience working on production web applications. Contributes across application layers, including frontend, backend, and deployment workflows. Pursuing Master's degree in Software Engineering (ST) at Universiti Malaya (part-time). Skillset includes: FastAPI (REST), Python, PostgreSQL, React, Next.js, JavaScript/Typescript, Figma, Git, Jira, AI integration (API, RAG, vector embeddings), DevOps (Docker, Linux CLI, nginx, pm2, ssl, hosting, CI/CD etc.)

WORK EXPERIENCE

Software Engineer, Axflix Technologies (Hybrid) Sep 2024 - Present

- Develop and maintain web applications using FastAPI with Python and Postgresql on the backend and React Next.js, TypeScript on the frontend.
- Led the development of a real-time server health monitoring system, allowing authorized personnel to monitor & control server services, reduced system downtime by 20%
- Involved Projects: Crypto Payment Gateway, SMS System, Streaming Services, Office Management Platform, Server Health Monitoring System
- Participate in Agile sprint planning, backlog refinement, and task prioritization to meet project milestones. Collaborate closely within the development team
- Optimized production system reliability by resolving 95% of critical bugs within 24 hours
- Conducted code review and established testing approaches, reducing post-release defects by 30% across the development team
- Reengineered the localization workflow and SEO strategy, enabling 100% index coverage and a 50% faster turnaround for multi-language feature delivery
- Document technical decisions, system changes, and workflows to support knowledge sharing

Software Engineer, Macbes Sdn Bhd (Hybrid) Jan 2024 - Aug 2024

- Involved in the revamp of 2 legacy repositories into a modern tech stack, improving application load times by 60% and reducing technical debt, collaborate closely with cross-functional teams.
- Implement and enhance software features, transforming them into reusable components/fully-responsive interfaces using Vue.js, React, Javascript.
- Maintain software products by addressing production issues, managing backlogs, and releasing hot-fixes raised by the support team.

Software Engineer, ARB Berhad (Hybrid) Jul 2023 - Dec 2023

- Developed responsive web application pages utilizing React, TypeScript, and FastAPI, managed via Git version control and Redux for global state.
- Implemented RESTful APIs and created reusable frontend components to simplify the project structure and improve development efficiency.

Internship, Finexus Group (On-site) Nov 2022 - Jun 2023

- Focusing on developing Web Software Development Kit (SDK) for E-Wallet mainly using React, Typescript, GraphQL
- Involving in implementing APIs, create reusable components simplifying project structure.

EDUCATION

Master of Software Engineering (Part-Time)

Oct 2025 - Jul 2027

Universiti Malaya

- CGPA: 3.90 / 4.00
- Involved Project & Paper:
- Energy-Efficient AI Image Generation through Selective Similarity-Aware Caching
- The Impact of Cross-Regional Dynamics on Task Coordination and Productivity in Distributed Software Teams
- AI Food Recommender System - FoodGenie
- Architecting Software Systems, Big Data Processing, Software Project Management

Bachelor of Computer Science, Software Engineering

Jun 2020 - Jun 2023

Tunku Abdul Rahman University of Management & Technology

- CGPA: 3.60 / 4.00
- Involved Project & Paper: FitBro - AI-powered Diet Consultant Android-based mobile application

ADDITIONAL INFORMATION

- **Languages:** English, Chinese, Malay
- **Certifications:** AWS Academy Cloud Foundations
- **Awards/Activities:** 2 times President's List Holder, 1 time Dean's List Holder, Roche Inter-University IT Virtual Hackathon 2020 - Shortlisted Team
